

ADMIRAL VESTAL SERIES

The Italian sea Group presented the new Vestal series produced by its brand name Admiral in the course of the latest Fort Lauderdale International Boat Show. Setzer Yacht Design studio from the US came up with the project design work for the new series, while also paying due attention to overseas market trends and maintained a touch of "Italian styling". This series will be made up of just three motor yachts a 42, a 50 and last but not least a 62 metre model. The 42 metre will be an aluminium semi-displacing yacht while both the larger ones will be displacing ones built in steel and aluminium. The Admiral stand at the latest FLIBS show cased a model of the Vestal 50 which was presented during a press conference which Ward Setzer attended and explained: "We wanted to be sure that every drawn line had a specific and direct scope. Every line or surface has a personality of its own and many will be benefitting from this throughout the yacht's life cycle, from the cut of the metal sheets to the soldering, filling, smoothing, painting during construction and also later by the crew carrying out maintenance work. Making sure a project is also functional and practical is part of our duties as designers". By way of confirmation of the brand's success on the US market, Italian Sea Group has recently announced the official opening of a new office in Fort Lauderdale. Francesco Carbone, Vice President & Sales Director for the Group declared as follows: "The US market is becoming increasingly important for our Group. The business model is changing, clients and brokers, captains and chief engineers are always seeking more services. Time is the core matter here and the best way to ensure durable results is through a direct well organized approach. Having the benefit of a corporate office in the US is something fundamental".
