

Admiral Tecnomar can go up to 90m

By [William Mathieson](#) |

The Italian Sea Group has continued the expansion of its operations with the purchase of a floating barge, which will equip the builder with the ability to extend its capacity to 90m.

The barge's dimensions comprise a length of 75m, a width of 24m and a construction height of 4m.

The dock has a lifting capacity of 1400t, reaching a maximum diving depth of 10m.

The main feature of the barge is its speed of immersion, managing to reach 1.6m in 15 minutes.

The unit is equipped with dual certification: as a barge and as a pontoon for navigation in coastal waters.
